

## Important Pack Change Information for all Brikmakers Clients

### **New Pack Sizes**

With the positive feedback received for our internal bricks utilising the Easy Slice Safe packs, we have decided to implement this initiative across our Two Course Face product lines and associated accessory products.

The relevant pack size changes are summarised in the attached table for your convenience and future reference.

### **Two Course face Blocks**

Brikmakers Two Course face block range will be converted to the 138 pack size (from the current 132 pack). This will standardise our Two Course brick range in the new Easy-Slice Safe Pack and also apply to the range of 2 Course accessory bricks.

### **VR76 Face Products**

The 264 pack size (currently used for our VR76 Internals) will be implemented across the VR76 (290x90x76) face product range. This range of accessory face bricks is currently supplied in 252 packs. The new pack size will apply to both solid and cored products in this range.

### **Converting existing Orders**

Where possible orders currently in the system will be supplied in the old pack size and if this is not possible the order quantity will be adjusted to the new pack size equal to or just below the order quantity. This will ensure our invoice will be equal to or below the order value.

Brikmakers, at its sole discretion, may elect to supply a small number of additional bricks at no extra cost to fulfill existing orders.

### **New Orders Received on or after Monday May 19, 2014**

In order to minimise disruption during the ordering process, in the case of new orders we recommend that all future orders for these products should be made utilising the new pack size. Fractions of packs will also be available in the new size, as is currently the case.

Brikmakers will adjust orders as required to enable the phasing out of the old style packs and the introduction of the new pack size. In the case of new orders, if the new pack size is not available Brikmakers will adjust your order quantity to the nearest pack size below the order quantity, or as is the case with existing orders, may elect to supply a small number of additional bricks to fulfill the order. At no time will the invoice total exceed the order total following this process.

We wish to thank you in advance for your patience and appreciate your cooperation during this transition period, which will enable these improved safer packs to be introduced onto your building sites.

Yours sincerely

Vince Scarvaci  
**General Manager**  
**Brikmakers**
