

**The secret to making
yourself irresistible to brickies
is in this unique Pak.**

Our BrickPak just became a whole lot smarter.

Verticlay Brick

Duraclay Brick

At Brikmakers, even though we believe our bricks are second to none, we know there's more to choosing the best product for your application than just picking the best bricks. That's why we've developed our new EasySlice SafePak. The benefits are so unique that we've been able to register the revolutionary design.

Our new Pak design enhances the superior properties of our bricks by making them safer and easier to split and move on your building site.

Not only are your bricklayers able to work more efficiently but you will have less waste when using our new Paks.

We've achieved this by rearranging the bricks in our Pak and eliminating the difficult-to-cut plastic retaining straps on the bottom of the Pak (as is the case on all traditional brick packs) so it's much, much easier to slice and move them around your building site.

The all-new, additional, single horizontal strap makes our Pak safer and more stable.

If you want much happier, more productive brickies on your site, order your next brick order in our all-new EasySlice SafePak.

In summary the Brikmakers EasySlice SafePak delivers six big benefits:

1. SAFER.

The new stacking pattern means bricks from our Paks are far less likely to fall when straps are cut on-site.

2. MORE STABLE.

Our Paks are stacked to make the new EasySlice SafePak more rigid. Each slice is double-strapped and our Pak is cross-strapped.

3. FEWER BREAKAGES.

Greater stability and additional strapping means fewer breakages and less waste.

4. EASIER MOVEMENT.

Our Paks are easier to transport to site with slices that are simple to separate and more stable once moved.

5. BRICKLAYER-READY.

Our new Paks are configured so the bricks are correctly orientated for faster and easier use.

6. SAVE TIME AND MONEY.

All the individual improvements in safety, stability and orientation add up to greater overall efficiency of use resulting in less waste on-site.
