

The

Lloyd Wright

Collection

The inspiration behind our classic new Collection.

The Lloyd Wright Collection is a distinctive brick format inspired by the acclaimed architecture of Frank Lloyd Wright.

The Collection is based on the thin roman brick which has been re-engineered by Brikmakers to have a unit size of 290 x 90 x 47mm, making it suitable for conventional brick coursing.

Frank Lloyd Wright, as most design and building industry professionals well know, was the American architect, writer, interior designer and educator whose innovative and original offices, churches, schools, homes, skyscrapers, hotels and museums still influence the work of many contemporary design and construction leaders around the world.

As a child, the young Wright spent many hours playing with the Fröebel blocks his mother had bought the family.

The distinctive geometrical clarity evident in so many of his buildings is attributed to this childhood experimentation.

And his always innovative use of Roman-style thin bricks is legendary.

Lloyd Wright is famous for his use of bold, cantilevered balconies and is arguably the originator of the 'open plan' approach to interior design, among several other now popular innovations.

Frank Lloyd Wright's work provides a cornerstone, if not the foundation, of architectural modernism and Brikmakers is proud to be helping his timeless style and simplicity to become an impressive and permanent part of Australia's architectural landscape.

Our RomanBrik is creating tomorrow's architectural classics.

Many of the five hundred or so completed works by Frank Lloyd Wright are now timeless monuments to the 'organic architecture' which led the American Institute of Architects to recognise him as "the greatest American architect of all time".

Brikmakers' new Lloyd Wright Collection honours the man and enables his still revered philosophy of designing structures which are "in harmony with humanity and its environment", to remain enduringly relevant.

The now classic RomanBrik look is no less striking and distinctive than when Frank Lloyd Wright began changing the face of modern architecture, and it will enable today's users to make it work seamlessly with conventional brick courses.

RomanBrik	Cored	Solid
Manufactured Dimensions		
Length(mm)	290	
Width (mm)	90	
Height (mm)	47	
Dimensional Deviation Category	DWI	
Approximate no per m ² (including joints)	58.5	
No per Pack	336	
Approximate wall coverage per pack (m ²)	5.7	
Approximate Unit Weight (kg)	2.0	2.6
Unconfined Compressive Strength (MPa)	> 18	> 22
Average 24hr Cold Water Absorption (%)	< 14	
Coefficient Of Expansion (mm/m)	< 0.8	
Initial Rate Of Absorption (kg/m ² /min)	< 1.5	
Potential to Efflorescence	Nil to Slight	
Salt Attack Resistance	Exposure
