CLAYBRICK

BLOKPAVE

BLOKSTONE

ECOBRIK

Welcome to Brikmakers' range of products

Western Australia's long-awaited, state-of-the-art clay brickworks has arrived! The \$110 million facility features the latest European and Australian technology, and will eventually produce 110 million clay bricks each year for WA homes and industry.

Brikmakers will continue to manufacture some of WA's most popular and trusted brands, including Blok pave, Blok stone and Eco brick. Brikmakers has now introduced the Clay brick range into the market, producing face bricks, internals and pavers made from the finest quality clay WA has to offer.

Now, more than ever, West Australians have an extraordinary choice of superb brick and paving products, in a range of colours, sizes, textures and shapes. Whatever the job, there is no limit to what you can create with Brikmakers.

Protecting your paving

The best way to protect your new Brikmakers paving is with the 'Concrete Colour Systems' product.

Sealer

- 4-5 m² coverage per litre (2 coats required).
- Semi Gloss – \$266.64 per 20L drum.
- Matt – \$261.29 per 20L drum.
- Natural is now available in 20L and 10L tins.
 - 20L – \$405.63 (inc. GST).

White finishing sand

- Available in 20kg bags.
- 6m² coverage approx.
- \$7.35 (inc. GST).

Application Legend

Please ensure the correct product is chosen for your application. Our experienced sales consultants can provide further information.

- Suitable for any outdoor entertainment area including alfrescos and patios.
- Suitable for light traffic. Recommended for driveways.
- Suitable for light commercial or unit developments.
- Suitable for heavy traffic including trucks. Recommended for any commercial project.

- 'Non standard colours – \$0.90 each. Pack price – \$226.80. Prices ex yard and including GST
- A 20% restocking fee plus transport applies to any stock returned to yards.
- Tumbled product surcharge add \$160/000 (inc GST).

IMPORTANT INFORMATION AND USEFUL HINTS FOR THE CLAYBRICK PRODUCT RANGE

Prices

- Prices are current at date of print, ex works. Prices are subject to change without notice.
- Prices include GST. Ruling rate will be charged on delivery date.
- Prices indicated are for standard pack sizes. Deliveries may be loose if less than two packs are delivered.
- Any Claybrick products collected from Brikmakers sites other than South Guildford may be subject to an additional charge to cover cartage from the South Guildford site.
- Half packs or loose product may be subject to a surcharge.

Ordering

Colours of products may vary between batches, so it is recommended that all required product be ordered at the same time.

Inspection of Product

Brikmakers encourages customers to carefully inspect and observe all delivered product to ensure all quality expectations are met. Should a problem arise, it must be directed to Brikmakers prior to the product being installed.

Score Marks

Score marks (vertical lines or 'drag marks') may be visible on the product face. These marks are the result of the manufacturing process.

Variations

Size and colour variations may occur due to manufacturing processes. Coverage may vary according to installation methods. Product meets the tolerance levels stipulated in Australia/New Zealand Standard AS/NZS 4455.

Blending

To minimise any noticeable colour variations, it is recommended that clay brick and paving products are blended from multiple packs as they are installed. Please contact a Brikmakers sales consultant for more information.

Loose Loading

Legal restrictions exist for the loading of loose product into vehicles. Please contact a Brikmakers sales consultant for more information.

Trailer Weight Restrictions

Please ensure your trailer is marked with load specifications. Unmarked trailers will only be permitted to carry a maximum of half a pack. If so, Brikmakers may provide a loan trailer.

BRICKS

Brick Face

A standard face brick features a single, purpose made face.

Colour variation may exist between the solid and cored version of an identically named product.

Utility Bricks

In addition to a noticeable variation in colour between bricks, some utility bricks are unsuitable for external use. For more information, please contact a Brikmakers sales consultant.

Architectural Shapes/Custom Colours

Certain products are available in customised colours. Please contact a Brikmakers sales consultant. Minimum order qtys apply.

Certified Strength Bricks

Brikmakers have made a range of certified strength bricks available for specialised building projects. Please contact Brikmakers for the costs and specifications of these products.

Two-Storey Projects

Face bricks will be block stacked on two-storey project sites. Based on the conditions of the site, this may not always be possible.

Coastal Brickwork

A weather struck sealed joint with approved damp proof coursing will be required to prevent the effects experienced of extreme exposure in coastal areas.

Damp Proof Course (DPC)

Damp proof course can provide maximum resistance from ground salts and moisture and must be installed in order to prevent brickwork erosion. It is imperative that the damp proofing be installed above ground level to act effectively.

Treating Vanadium stains

Have you ever noticed those yellow/green stains on light-coloured bricks? They're caused by a chemical which occurs naturally in clay called vanadium.

Should vanadium stains pop up on your bricks, there's no need to worry – they'll naturally disappear. However, if you want to give mother nature a bit of a hurry-up, you can get rid of the stains by scrubbing them down with a mixture of 500 grams caustic soda in 5 litres of water.

* When selecting product it is recommended that you visit a Brikmakers selection centre to verify variations in colour and texture.

IMPORTANT INFORMATION AND USEFUL HINTS FOR BLOKPAVE PRODUCT RANGE

Efflorescence – Do not be alarmed

A white deposit known as efflorescence may sometimes appear on any concrete or masonry product. It does not affect structural integrity and will dissipate over time. Efflorescence is not indicative of a flawed product. Efflorescence is a temporary condition where salts migrate via evaporation to the surface of the paver. This is a transitory phenomenon as the pavers acclimatise to their new environment. Efflorescence may be temporarily removed by stiff brushing. Alternatively contact Brikmakers for cleaning instructions.

Physical Characteristics

Blokpave Concrete Pavers are manufactured to exceed the requirements of the Australian and Industry Standards (Australian Standard AS/NZS 4455 – Masonry Units and Segmental Pavers and CMAA T44 Concrete Segmental Pavers Guide to Specifying). Blokpave pavers are manufactured with chamfered top edges which minimise chipping and spalling and facilitates the removal of water from the surface of the pavers. Faces without chamfers may be prone to chipping. Most Blokpave pavers are made with space nibs on the sides of the unit which automatically provide the minimum joint width when installed. Blokpave pavers meet or exceed pedestrian slip resistance guidelines in Australia Standard AS/NZS 4586.

Cutting

Prior to cutting please fully wet the product. This will reduce the chance of cutting residue staining the product. It is also important to ensure all residue is washed from any cut product prior to laying.

Staining

Occasionally various types of stains, blemishes or efflorescence may become visible on the paver surface. These are typically caused by tannins, humus and salts from the surrounding soil/environment. To protect your paving it is recommended your pavers are laid on clean salt free sand and that they are sealed.

Tyre Markings

Tyre marks may appear on the pavement surface. This may occur due to the tyre compounds, vehicle weight and action of the power steering.

Garden Mulches

Mulches contain tannins that can leach onto paving. Avoid dumping mulch directly onto paved areas and minimise water run off from the mulch onto the pavers.

High Pressure Cleaning

The use of high pressure water cleaning is not recommended unless performed by a professional, as it may damage the paver surface.

Sealing

To protect your finished project and to allow easy cleaning it is recommended that your paving be sealed. In particular paving in coastal areas or harsh environments. The application of a sealer will protect your investment and maintain the pavement's appearance. Brikmakers recommends and distributes Concrete Colour Systems sealer range.

For further information contact Sales on 1300 360 344.

Salt Water Pools

Where paving is to be used around a pool it is recommended that the pavers along the edge are protected with the appropriate sealer

Chipping and Breakage

Some minor chipping and breakage may occur during the delivery and installation of the product. It is recommended that this product is used for cuts. This should not exceed 5% of the completed project.

Dimensions

Brikmakers manufactures its products utilising state of the art paver production equipment that moulds the pavers using high pressure and high frequency vibration. This process ensures that the product supplied is within the allowable dimensional tolerances specified in Australian Standard AS /NZS 4455. Product dimensions quoted are nominal and subject to variation due to product colour and batch. Numbers per square metre quoted are nominal and subject to variance due to installation.

Ground Preparation

Paving must be laid on a compactable sand bed of at least 30mm thick. The sand must be clean, well graded with no soluble salts, containing no roots or rubble. Failure to use clean sand may result in your pavers becoming stained.

Product Presentation / Installation

Every effort is made to provide products consistent with samples. As all our products are made with naturally occurring raw materials and differing manufacturing techniques, variations will occur. Colour, surface appearance/texture and size variation will occur naturally within and between batches. It is recommended that there is careful inspection of all pavers delivered and appropriate blending and supervision during installation to ensure satisfactory results.

Laying

For best results it is important to blend products from various packs as you lay. It is recommended to maintain a 2-3mm joint between pavers for clean jointing sand to be swept between the pavers to provide effective lock up.

Jointing Sand

Jointing sand must be clean, sharp, and well graded with no soluble salt or clay. Brikmakers recommends white finishing sand. For further information contact Sales on 1300 360 344.

Villagepave / Renopave

Our Villagepave and Renopave ranges are rustic products that feature subtle variations in size, colour and surface finish. This rustic nature is intended as part of the product's appeal. To obtain best overall results the product must be blended from several packs during laying. Villagepave is acceptable for use in driveways with a recommended herringbone pattern.

Helenastone

Brikmakers do not recommend the use of Helenastone 400x400x60 for use in roadways as a substitute or alternative for asphalt. Unless using the recommended halfbond pattern at 90° to traffic flow.

At the completion of the project, phone 9574 7219 to have pallets collected.
